Amendments to the Claims

The following listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims

1   1 (Previously Presented). A speech recognition system, comprising:

2   at least one recognizer to produce output signals from audio input signals based

3   at least in part on speech models and a grammar file, the grammar file including at least

4   one command syntax;

5   a feedback module to generate feedback data, the feedback module modifying

6   the speech models and the grammar file based on the feedback data to improve the

7   performance of the at least one recognizer; and

8   a controller adaptable to select one recognizer based at least in part on the

9   feedback data from the at least one recognizer for an input utterance, the selected

10   recognizer performing most accurately for the input utterance among the at least one

11   recognizer.

1   2 (Previously Presented). The speech recognition system of claim 1, wherein the

2   controller is operable to coordinate production of the output signals.

Application No.: 10/036,577   2 ..   Examiner: Lerner, M.
Filed: 12/31/2001   Art Unit: 2626

1   3 (Previously Presented). The speech recognition system of claim 1, wherein the

2   controller is adaptable to provide the feedback data to the at least one recognizer

3   wherein the at least one recognizer is operable to receive the feedback data.

1   4 (Cancelled).

1   5 (Previously Presented). The speech recognition system of claim 1, wherein the

2   controller is adaptable to store the feedback data in a storage.

1   6 (Cancelled).

1   7 (Currently Amended). The speech recognition system of claim 1, wherein the

2   feedback module modifies the grammar file by updating the ~~grammar files~~ grammar file

3   to include a weighting for possibilities based upon the feedback data.

1   8. (Cancelled).

1   9 (Currently Amended). The speech recognition system of claim 1, where the

2   feedback module is adapted to generate the feedback data based on internal analysis

3   of at least one of the grammar file, dialog progression, or the output signals.

1   10 (Currently Amended). The speech recognition system of claim 1, wherein the

2   feedback module is adapted to generate the feedback data based on external inputs.

Application No.: 10/036,577   3   Examiner: Lerner, M.
Filed: 12/31/2001   Art Unit: 2626

3   comprising at least one of an annotated grammar file or information received through an

4   application programming interface.

1   11-30. (Cancelled)
